

# CHANNEL®

## NOW OFFERING POWDER COATING!

We are excited to announce that Channel Manufacturing is now offering an additional finish option for our products: powder coating! This advanced finishing technique enhances durability, aesthetics, and environmental sustainability, providing an exciting new choice for our customers.

### **Why Choose Powder Coating?**

#### **Durability:**

Powder coating provides a long-lasting, tough finish that resists chipping, scratching, and fading. It is also more resilient against moisture, chemicals, and extreme weather conditions.

#### **Corrosion resistance:**

Powder coating provides a protective barrier against rust and other forms of corrosion, while also offering enhanced protection from moisture and harsh chemicals, ensuring a longer lifespan for the coated materials.

#### **Aesthetic:**

Powder coating provides a smooth, uniform, and high-quality finish in a variety of colors and textures. It comes in numerous colors and gloss levels to meet both functional and aesthetic needs.
